Claims 7-8 and 12-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 7 and 13 the phrase "curved inwardly in a direction towards said handle" is found to be misdescriptive. The end of the curve of the hook certainly does not point to the handle.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 4, 7-8, and 11-13 are rejected under 35 U.S.C. 102(b) as being anticipated by St. Peter.

St. Peter shows at Figure 2 a prying tool having a handle 14 and an engaging member having a web and a tapered hooked end 16. The handle 14 is considered to be substantially straight. The device is capable of performing the recited intended use.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2, 4, 7-8, and 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Patti in view of St. Peter.

Patti shows a pulling tool having an elongate handle 1 and an engaging member 7 having a tapered hook portion.

St. Peter teaches that a tapered hook engaging member having a web may be fixedly attached to a lever.

To fixedly attach the tapered hook portion of Patti by means of a web to the lever would have been obvious in view of the St. Peter disclosure. One skilled in the art would have been motivated to do this in order to simplify the tool by eliminating the adjustment positioning of the hook along the lever. The elimination of an element with the loss of its function has long been considered obvious.

The above applied structure is considered to be capable of performing the recited intended use.

Applicant's remarks have been given careful consideration. The newly claimed features of the web fixed to the lever is anticipated by St. Peter.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
